Manitoba – Roadside Assistance Operational Analytics

Total Scale

327.67K

Data Horizon

34 Months of Data

Model Overview: Star schema with 4 core dimensions (Location, Channel, Service Type, Date) and 15 production-ready measures.
Row Reconciliation: 335K raw rows successfully processed, deduplicated, and reconciled and reduced to 327.67K .
2024 Baseline Match: Validated against public annual report figures (111,973 total requests, 11,253 tire changes, 3,828 battery replacements).
Duration Integrity: Replaced truncated minute logic with total duration calculations to accurately capture remote corridor response times.
Rating Accuracy: Preserved null states on unrated satisfaction calls so averages correctly ignore missing scores instead of skewing data with artificial zeros.
Text Normalization: Implemented dual-column Text.Trim and Text.Lower mapping to eliminate trailing-space errors and rescue mislabeled "Other" entries.
